Your Favorites is a lightweight, yet reliable program that enables you to store Internet bookmarks in an easy to manage space. The application allows you to copy the URLs of your favorite websites in the designated list and easily access them at a different time. You may add or remove entries with one click. Your Favorites acts as a small storage space, dedicated to Web addresses, which allows you to keep all the URLs in one place. Moreover, you can immediately open them, by double-clicking the row in the list. The software requires that you insert the URLs with the correct syntax, and unlike browsers, it cannot open websites if you only entered the name and the top level domain. Also, it cannot process email addresses, but it can access online mail service websites. In other words, you may add any type of character strings in the list, but the software can only process the URLs. Add, remove, organize URLs Managing Your Favorites is simple and requires a few moves. Just enter the URL, with the correct syntax, then Add it to the list. Alternatively, you can select an entry in the list and quickly remove it. The application can substitute the bookmarking function of browsers and store URLs in a specialized list instead. You can only access the saved websites in online mode, therefore an Internet connection is required in order to view the webpage content. In this particular case, Your Favorites does not allow you to open the HTML pages in offline mode. URL organizer with no searching engine With Your Favorites, you can store all the important URLs in a single list and quickly access the websites, whenever you need to. While the application is lightweight and useful, it does not feature a searching function, which can make it very difficult to find a particular entry, especially if you saved a multitude of URLs.

Summary Your Favorites is a lightweight, yet reliable program that enables you to store Internet bookmarks in an easy to manage space. The application allows you to copy the URLs of your favorite websites in the designated list and easily access them at a different time. You may add or remove entries with one click. KEYMACRO is a highly configurable character map editor that allows you to create your own key mappings. Simply drag and drop a character map to the character map browser and write your own mappings. Once you're finished, export your character map to your clipboard or save it to a file. It's that easy. Create, update, and export your mappings to keymaps.xml KEYMACRO supports plain text mappings and multiple definitions for one key, so you can create the exact mappings you need. Import and update your mappings from a file KEYMACRO automatically detects mappings in a text file and updates the character map editor with new mappings. Customized keyboard shortcuts KEYMACRO allows you to assign custom keyboard shortcuts to your mapped characters. Use your custom shortcuts in a normal text editor or any software that uses key mappings. Handy shortcuts overview KEYMACRO also provides a handy overview that shows you a list of the mappings currently saved to the editor. Import and export XML and CSV files KEYMACRO supports plain text mappings and multiple definitions for one key, so you can create the exact mappings you need. Import and update your mappings from a file KEYMACRO automatically detects mappings in a text file and updates the character map editor with new mappings. Customized keyboard shortcuts KEYMACRO allows you to assign custom keyboard shortcuts to your mapped characters.
