

Powel books, the suppliers of this book did a great job of giving me. It gave me a completely new look at typewriters. Then I thought about this question when I was in Finland, studying wood for building a house. The wood for this house was collected from a huge area in Ollila. When I approached Finnish workers to find out how to assemble this wood, they replied that once the wood had dried it would not shrink and therefore would not be easy to assemble. The book contains recipes on how to dry wood in the air to a moisture content of 5-6%. That would be very wise of me. On the other hand, it would be foolish to build with solid wood because it does not absorb moisture. Finally, after a few months, I figured out how to dampen wood so that it can work as written in the book. When I tried to use the book's instructions, the process was very long, from the furniture assembler's and maker's point of view. Few people realize that wood is a great building material. However, studying materials in a wood or plywood factory is another example of how easy it is to improve existing results. In addition, in the factory where I worked, I gained invaluable experience through the use of the corpus callosum and sawtooth movements. It was very interesting, but in the end, I moved on to other jobs, so it became a part of my life again. For 30 years I have used numerous types of wood, and only now I have discovered that a board with a beam created from these materials works in a completely different way than a concrete board. It's as practical as working with wood. In my book "Building a House" in the chapter on assembling a wine cellar, I made a photo essay. I tried to recreate what the wine cellar looked like when it was completed. This work was done by hand and took three and a half months, but it was very interesting because I used parts from those small doors that were in the old cellars. Many of the previous books have paid great attention to the construction of walls or ceilings. I also studied in detail a variety of different types of windows, and another study, as soon as I described typical windows in my previous book, How to Finish Building a House, began to gain popularity. One of the biggest constraints specific to construction work is time.

The time taken to manufacture the building
