Using Joda time. For example I have two Date values d1 and d2. I am trying to find a date value d in Date d1 and Date d2 If a certain date is equal to either d1 or d2 I would like to set one variable value to true and the other to false. Does Joda have a function that can do this? Or do I need to store each date in a string and compare them? I am new to this library. I have
