Socusoft Photo to Video Converter is a photo slideshow maker which can be used to create looping video slideshows from pictures with great ease. The installation process is rather smooth and even though we encountered a bug while previewing some images, the bug did not affect the whole program. From the main interface, you can import pictures from one folder or drag'n'drop them on to the preview window. They can be rotated, added on to the slideshow and grouped according to the following categories: portrait, landscape and dual mode. There is an option to automatically adjust brightness, contrast and gamma, and also to add text (slogan, title and author). You can set the frame rate and the video encoding quality, as well as the size of the exported video file and the audio track. There are also several transitions to choose between, and you can preview their effect. You can even record sound with your microphone. Socusoft Photo to Video Converter can output slideshows in several formats: MP4, MOV, AVI, FLV, 3GP, MPG, PSP and SWF. It also works on portable devices and cell phones. In short, Socusoft Photo to Video Converter provides a good selection of features and it is easy to use, although it has a few bugs and problems.

Socusoft Photo to Video Converter Description: Ever want to create your own DVD movies with your favorite movies? Or do you want to take your best friend's wedding on video and create your own DVD? You should know that there are many video editing software to help you with this task. Today I'll be introducing you to the Nero Video 7.
