What you may not know is why websites should be designed for ultra-mobile. In this post, we'll explore some of the most compelling reasons why your website should be ultra-mobile. 1. You'll Increase ComScore Rankings ComScore has recently released a study that shows more and more people are using mobile devices for online shopping. And it's not just smartphones or tablets. Other devices, such as laptop computers, are also becoming more popular. This is a great thing, as it will help drive traffic to your website. However, there's another benefit to creating a mobile-friendly website. The ComScore study revealed that mobile websites win when it comes to ComScore rankings. In other words, the better your mobile version of your site, the higher your traffic will be in the ComScore rankings. So, if you're looking to increase traffic to your site, it might be time to pull out your laptop or throw out your desktop. 2. Low-End Tablets Aren't Being Used To Access the Web A recent report from NetMarketShare stated that almost half (46.3%) of people who use their tablets for online shopping are accessing the web via the desktop version of the device. Desktop computers are also being used by a growing number of consumers. Desktop computers are great because they are more powerful than mobile devices. But, if you want to reach customers who are using low-end tablets to access the web, your website needs to be ultra-mobile. If you don't adopt a mobile-first strategy, you
