Conventional tape drives have a tape reel that runs through a read/write element. If the tape reel is disposed in a central or middle area of the tape drive, the tape reel may bind against the read/write element. This binding may occur if the tape is wound up tightly or if the spool is weighted so that it rests in a location other than its center. Tape drives also have a tape cartridge. The cartridge has a tape reel that runs through a read/write element. If the tape reel is disposed in an upper or bottom area of the tape drive, the tape reel may also bind against the read/write element. This binding may occur if the cartridge is weighted so that it rests in a location other than its bottom or if the cartridge is not secured to the drive with enough force. Conventional tape drives also have a tape spool that receives the tape reel from the cartridge. The tape spool may be rotated in a direction that causes the tape reel to wind up the tape. If the tape reel is located in the central or middle area of the tape drive, the tape reel may bind against the tape spool when the tape spool winds up the tape. Also, the tape spool may bind against the tape reel if the tape reel and the tape spool wind up the tape tightly. The tape spool and the tape reel may bind together due to a frictional interaction that occurs when the tape reel is wound up. The frictional interaction may be between the tape reel and the tape spool. The frictional interaction may also be between two parts of the tape spool, such as when a hub of the tape spool is forcibly pressed against the tape reel as the tape spool winds up the tape. The tape spool and the tape reel may also bind together because the tape reel is not well secured to the tape spool. This is generally the case when a single tape spool winds up the tape in both the front and back direction. If the tape reel binds to the tape spool when the tape reel is wound up tightly, the tape reel will not be well secured to the tape spool. This will prevent the tape reel from being pulled away from the tape spool and may cause the tape reel and tape spool to bind together.For indispensable reporting on the coronavirus crisis, the election, and more, subscribe to the Mother Jones Daily newsletter. WWE has announced that the Road to WrestleMania 29 will feature a "State of the Union" address from one of their headliners, Brock Lesnar. No word on who will be speaking. But we would have to assume this is a standard press conference of sorts, in which "The Beast" delivers a check in address of one sort or another. The timing of the announcement also makes sense, coming just eight days before WrestleMania. WrestleMania 29 will take place on April 2 at Raymond James Stadium in Tampa, Florida.
