X-Jampal

X-Jampal Mobile Music Player lets you share the music you're listening to on your smartphone or tablet with other people or chat with them via chat platforms. With X-Jampal you will be able to jukebox your playlists on your phone. Create a playlist on your mobile phone that will let you share your music with friends via chat or even on social networks. Jukebox your playlists, and then go to the next song without stopping. You will be able to manage, sort, organize, and search your music collection in no time. If you have any trouble with the app or have comments or suggestions, please let us know by sending an e-mail to More than 200 million people are estimated to have mobile phones. More than 100 million people use social media. Every second, 1 million users visit a website via their mobile devices. Stats taken from StatCounter. The mobile market is growing faster than most other markets. Nowadays, mobile apps are downloaded millions of times, and people use them a lot. Read more about why smartphone use is increasing. My Review I was looking for a way to jukebox my favorite songs to share them on social networks. I found a way to do it from apps like LimeSuite or Jampal, but the problem with those apps is that you need to manually add songs to them. That was annoying, but I finally found a way to do that from my iPhone. This means that you don't need to use the computer anymore to add songs to your jukebox, which makes my iPhone more usable to me. And it can create playlists that you can share via social networks. You can add songs from your smartphone, and you can search by artist or song title. You can sort the songs by genre or latest added. The app has a unique feature that is really great. It offers a choice to play songs from a specific category, so you can select either a playlist or a specific song to play. If you are a user of a social network like Facebook, it lets you send your playlists or songs via chat. Then, you can let your friends know that you are listening to these songs, or you can talk to them while you are playing them. This is perfect if you don't want to

What's New In?

X-Jampal is the portable version of Jampal, an application that offers some unique advantages over the other jukebox and MP3 player programs available. Jampal can store a music library of over 12000 songs with ease. You can sort, organize and categorize your tracks. Features: * Supports automatic song ID function * Supports file folder in both MP3 and OGG formats * Supports three equalizers * Supports a variety of effects * Supports three music player profiles * The other jukebox programs are mainly used to play music. This application can also be used to search for files and folders. * Supports WMA, MP3 and OGG formats * Supports both 32-bit and 64-bit environments * Support for both FAT and NTFS file systems * Supports ISO image format * Supports image color album * Supports image color scrolling * Supports text messages to play * Supports music file searching * Supports ID3 tag * Supports subtitles * Supports screen orientation lock * Supports multi-language support for the GUI Requirements: * Windows 98/ME/NT4/2000/XP/Vista * iTunes 4.7 or later * Winamp 3.9 or later * Winamp Live or later * Winamp Plus or later Installation: * Find the files that contain the media name for the jukebox program you are running, and uninstall them. * Run the CD\DVD installation file that you just downloaded, and follow the instructions. * Download the application file for your computer, and install it. * Register the application name, and run it. * Set the music style, and play the application. * The application icon, sound, and interface look like Winamp 3.9 or later. Please see the screen shot section of this article for the screen shots. ** Note** This application comes with two installers, for both Windows and Mac. For Windows users, if the installer that works on your computer is the 32-bit one, you might have to uninstall it to run the 64-bit version. Troubleshooting: * If you cannot remove the application from your computer's computer-tray, try removing it from your desktop first, then run the uninstaller again. * If the application stops playing the music, make sure the music files are located in the installation

System Requirements:

Windows Mac OS X Linux SteamOS / Linux Minimum: OS: OSX 10.8 / 10.9 / 10.10 / 11.4 / 11.5
Processor: Intel Core 2 Duo or better Memory: 2 GB RAM Graphics: NVIDIA Geforce 6500 or better
DirectX: Version 11 Storage: 50 GB available space Sound Card: Soundblaster Live! 5.1 or better
