The influence of temperature and pressure on the enzymatic hydrolysis of lignocellulosic biomass was investigated. It was found that increased temperatures lead to increased sugar yields, while increased pressure leads to decreased sugar yields. The highest sugar yields were obtained at 25 degrees C and at high pressure (150 MPa), which led to saccharification of approximately 87% of the cellulose. The enzymatic hydrolysis process was investigated with regard to heat transfer and gas properties.Q: Cannot figure out why this simple app crashes This is my first C++ program.
