What's New In AutoCAD?

Extended markup tools, such as block styles, can be used to automatically create consistent and scalable label styles for your drawings, and existing label styles can be used to promote consistency across your organization. Lines and rectangles: With a new set of line and rectangle tools, you can draw and edit lines and rectangles automatically. You can even detect the intersections of multiple lines and rectangles, and automatically create geometric equations. The precision of these new tools is comparable to 2D tools and exceeds the precision of command-line commands. (video: 1:17 min.) Included in the new features and improvements for AutoCAD 2020 Release 1, as well as the AutoCAD 2023 product, are enhancements to 2D text, 3D polygon, circle, and polyline and shape creation and editing tools. For example, a new set of 2D text and text style tools will make it easier to edit text-like objects, such as bullet points, section titles, and individual line titles. These tools will provide improved precision and a consistent look across different parts of your drawings. (video: 1:13 min.) You can now interactively choose your brush size when you edit linetypes. Additionally, you can use both left- and right-click shortcuts to quickly access brush options and undo commands. (video: 1:11 min.) When using the CONTOUR command, you can now offset the contour shape by a fixed number of millimeters, and you can choose a material that the contour lines are rendered with. (video: 1:14 min.) You can add a 3D LAYER or axis to a 2D line or polyline. For example, you can add a 2D elevation or dimension line to a 2D line to create a 3D cross-sectional view of a part. Or, you can create 3D line segments that follow a specific orientation to create a 3D CNC, V-groove or CNC-milled blade of a CNC machine. (video: 1:15 min.) You can choose which areas of your drawing appear in Outline view. When you toggle from Object mode to Outline view, your drawing highlights the selected area. (video: 1:11 min.) You can now select a block style from a BLOCKSTYLEEXPLAINER object. You can select a style to apply to a block, or create a new
